

KNOW YOUR NRD

UPPER LOUP
Natural Resources District
Thedford, NE

Nebraska's Natural Resources Districts
Making the Good Life Better Since 1972

Summer 2016

ULNRD Quick Facts:

- ULNRD encompasses 4,275,000 total acres:
 - 91% grassland
 - 5% open water and wetlands
 - 2% other agland & baren
 - 1% forested
 - 1% irrigated cropland
 - less than 1% dryland
 - less than 1% urban & roads
- Provides free nitrate and bacteria water testing
- 100+ groundwater wells checked biannually for static water levels
- Nitrate levels tested
 - 200+ domestic wells tested
 - 100+ irrigation wells tested
 - 11 wells with continuous recording
- Collected and recycled 364,344 tons of material since July of 2010

Soil Conservation and Land Treatment

Conservation is vital to ensure the sustainability of our natural resources. The ULNRD offers cost-share assistance for practices that help reduce erosion, improve forage production, stabilize the soil and impound runoff. Such practices include planned grazing systems, critical area planting, range seeding, and noxious weed control.

The District also has two no-till drills and a gopher bait machine available for producers to use. One drill is a 10-foot Great Plains drill and the other drill is a 20-foot Haybuster drill that was purchased in 2015 through a grant from the Nebraska Environmental Trust.

Working Together

The ULNRD offers several cost-share programs to ease some of the monetary burdens associated with implementing various conservation procedures. We provide cost share funding for drip wells, WILD NE, yard enhancement plantings, trees for newborns, Memorial trees, planned grazing systems, shelter belt plantings, noxious weed control, soil testing and Corners for Wildlife.

Alongside our cost-share programs, we offer these services: recycling, no-till drill and gopher machine rental, deer and small rodent repellent, tree and shrub planting, weed barrier installation, water testing, Chemigation permits and inspections. We are also a Hazard Mitigation Plan Partner.

Wildlife Habitat

The ULNRD assists landowners with the enrollment of a variety of wildlife habitat conservation programs that provide incentives to plant native grasses, shrubs and trees. The District cooperates with the United States Department of Agriculture, Pheasants Forever, and the Nebraska Games and Parks Commission to protect our habitat for future generations.

Current Projects

The ULNRD is currently working a Thermo-Imaging project in the Loup River Basin, in which ULNRD partnered with Lower Loup NRD, USGS and the Environmental Trust. Another current project in progress in the District is the Brown County monitory well network.

Recycling Program

To promote conservation, water quality and waste reduction within the District, the ULNRD implemented a district-wide recycling program in 2010. In 2012, a baling facility was built to house one baler to bale cardboard and paper and one aluminum/tin densifier to crush aluminum and tin. Ten collection recycling trailers are placed throughout the district. Materials collected are number 1-2 plastics, aluminum, tin, paper, newspapers, magazines, cardboard and electronics.

Groundwater Quality and Quantity Management

The ULNRD keeps over 292 domestic well users protected by testing their wells annually to ensure the quality of their drinking water. Domestic wells are a primary source of drinking water for many families within the District. Domestic wells are susceptible to nitrate and coliform contamination due to their construction, location, soil type and age. The District's primary soil type is sand. This type of soil allows contaminants to pass through more easily, thus increasing the potential for

contamination. Average nitrate levels across the District run 2.8ppm, well below the EPA's safe level of 10ppm. A district-wide network of a 100 plus observation wells is in place to help monitor static groundwater level changes in the spring. Several soil moisture sensors are

located throughout the NRD to help producers see the value of irrigation performance through better scheduling and use of best management practices.

Education

The ULNRD believes that education is the key to protecting the future of natural resources and strives to provide the latest information to both adults and youth. The District provides presentations for any school or community organization. These presentations can focus on a variety of topics such as water, wildlife, pollution, forestry, land treatment, and other conservation topics.

The ULNRD partners with other districts to hold the Adventure Camp about the Environment (ACE Camp). This year marked the seventh annual ACE Camp. ACE Camp provides middle school students a fun environment to learn more about our soils, water, forestry, wildlife and range. The district also provides scholarships for ACE Camp, Nebraska Youth Range Camp, as well as assisting Land and Range Judging contests. Other educational opportunities are available for district students and educators such as hunter and boater safety, and a resource library.

Tree Planting

Trees are one of our most important natural resources. They provide home and livestock protection, prevention of soil erosion, and provide wildlife habitat. The ULNRD offers low cost tree and shrub seedlings available in spring, as well as, Yard Enhancement and Trees for Newborns programs. We also provide planting and weed barrier services, design, and technical advice for planting sites and windbreaks.

Nebraska's NRD'S

- Protecting Your Health through Groundwater Monitoring
- Protecting Our Natural Resources for Future Generations

NRD's were created by the Nebraska Legislature in 1972. They were formed using Nebraska's 13 major river basins. While all NRD's share a common set of responsibilities, each district is governed by its own locally elected board of directors. Each district sets its priorities and develops programs that best serve local needs.

The ULNRD is dedicated to the conservation, preservation, and wise use of natural resources. We are based in Thedford and cover eight counties in the Sandhills with a population under 5,000. We are governed by 11 elected directors. The NRD and its programs are locally funded through property taxes and customer sales. ULNRD continues to maintain a responsible budget to lessen the property tax burdens of its constituents. For example, on a property valued at \$50,000 the ULNRD's share is \$12.50 per year.

Concerned about your natural resources? So are we. Give us a call or stop by our office and visit with us about your needs. Find out more about Nebraska's NRD's at www.nrdnet.org
